- According to Faraday's Law, a voltage is induced proportional to the rate of change of magnetic flux.

3. AC Voltage Production

- The induced voltage alternates in polarity as the magnetic flux changes direction during each rotation.
- The frequency of the generated AC depends on the rotation speed and the number of poles.

4. Output Voltage and Current

- The magnitude of the output voltage is influenced by the number of turns in the winding and the strength of the magnetic field.
- The winding diagram helps optimize these parameters for desired voltage levels.
