Sample Multiple Choice Questions and Answers from Guyton

Below are curated MCQs covering various topics from Guyton's physiology, complete with correct answers and explanations.

1. Cardiac Output and Heart Rate

Question:

What is the primary factor that determines cardiac output?

- A) Heart rate
- B) Stroke volume
- C) Blood viscosity

D) Blood pressure

Answer:

B) Stroke volume

Explanation:

Cardiac output (CO) is calculated as the product of heart rate (HR) and stroke volume (SV):

$CO = HR \times SV$. While both HR and SV influence cardiac output, stroke volume is the major determinant because it reflects the volume of blood ejected per beat, influenced by preload, afterload, and contractility.

2. Regulation of Blood Pressure

Question:

Which of the following mechanisms primarily maintains short-term blood pressure regulation?

A) Renin-Angiotensin-Aldosterone System

B) Baroreceptor reflex

C) Kidneys? long-term adjustment

D) Erythropoietin secretion

Answer:

B) Baroreceptor reflex

Explanation:

Baroreceptors located in the carotid sinus and aortic arch rapidly respond to changes in blood pressure by adjusting heart rate and vasoconstriction, providing quick, short-term regulation.

3. Gas Exchange in Lungs

Question:

The main factor that affects the rate of oxygen diffusion from alveoli to blood is:

- A) Partial pressure gradient of oxygen
- B) Hemoglobin concentration
- C) Blood pH
- D) Lung compliance

Answer:

- A) Partial pressure gradient of oxygen

Explanation:

Oxygen diffusion rate is primarily driven by the partial pressure difference between alveolar air and blood. The higher the gradient, the faster the diffusion.

4. Renal Function and Filtration

Question:

The glomerular filtration rate (GFR) is primarily regulated by:

- A) Sympathetic nervous system
- B) Afferent and efferent arteriole tone
- C) Tubular reabsorption processes
- D) Urine flow rate

Answer:

- B) Afferent and efferent arteriole tone

Explanation:

Vasoconstriction or dilation of the afferent and efferent arterioles adjusts glomerular hydrostatic pressure, thus controlling GFR.

5. Nervous System and Reflexes

Question:

Which nerve carries parasympathetic fibers to the heart?

- A) Vagus nerve (CN X)
- B) Phrenic nerve
- C) Sympathetic trunk
- D) Glossopharyngeal nerve (CN IX)

Answer:

- A) Vagus nerve (CN X)

Explanation:

The vagus nerve is the primary parasympathetic nerve supplying the heart, reducing heart rate through its fibers.
